PROFESSIONAL SUMMARY

I build AI-powered products — not just code. Full-Stack Developer, AI Engineer, and Industrial Engineering student at the University of Benin. I specialize in architecting autonomous AI agents, real-time WebSocket systems, and cross-platform applications using Flutter, Django, Next.js, and AWS Bedrock. I've shipped 8+ production projects solo, earned 5 Devpost hackathon awards, and hold certifications in Lean Six Sigma (process optimization) and AI Literacy (IBM). I combine systems-thinking from engineering with clean code practices to deliver products that scale, adapt, and solve real problems. Fluent in English; conversational French (A2).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), Dart, Kotlin, SQL, HTML5, CSS3

AI & LLMs: AWS Bedrock (Nova), OpenAI, Anthropic, Gemini, LangChain, AI Agents, Prompt Engineering, LLM Orchestration, OpenRouter

Frontend & Mobile: Next.js 15, React, Flutter, Tailwind CSS, Framer Motion, Responsive Design

Backend & Cloud: Django, FastAPI, Node.js (Express), WebSocket Channels, Supabase, PostgreSQL, REST APIs, Vercel, Render, Streamlit Cloud

Web3 & Security: EIP-712, ERC-8004, Clarity 4 (Stacks), Auth0, JWT, OAuth2, RBAC, Post-Condition Security

DevOps & Tools: Git/GitHub, Docker, Gradle, Android Studio, VS Code, Postman, AWS CDK, Terraform (learning)

Industrial & Management: Project Planning & Scheduling, Budget Management, Process Optimization (Lean Six Sigma), Quality Control, Technical Documentation

CERTIFICATIONS

• **Lean Six Sigma Yellow Belt** — 6SigmaStudy | Issued June 2026 | [View Certificate](#)

• **IBM AI Literacy** — In Progress (Completion imminent)

TECHNICAL PROJECTS

Protocol-Zero — Autonomous AI Trading Agent | protocol-zero.streamlit.app | Python, AWS Bedrock Nova, EIP-712, ERC-8004, Streamlit | 2025–Present

Built an AI-powered DeFi trading agent combining Amazon Nova Lite (Bedrock) for agentic market reasoning with EIP-712 cryptographic trade signing and a 6-layer fail-closed risk pipeline. Integrated multi-provider LLM routing (Nova, OpenAI, Anthropic, Gemini) with zero vendor lock-in. Achieved 100% pass rate across 122 automated tests. Hackathon winner — Devpost.

Ghost-Touch 3020 — AI-Powered Spatial Education Platform | ghosttouch.me | Flutter, Django, WebSocket Channels, Python, PostgreSQL | 2025–Present

Founded and built a hand-tracking educational platform replacing smartboards with air-gesture interaction and real-time neural engagement analytics. Architected the full stack solo — Flutter with Riverpod, Django with WebSocket Channels (sub-100ms latency), and a Python bridge. Built a 620-line AI neural engine tracking student attention, emotion, and gaze. Delivered 25,000+ lines of production code with GDPR/COPPA compliance.

SynAegis — Autonomous DevOps & Security AI Agent | synaegis.vercel.app | Next.js 15, FastAPI, Gemini Live API, WebSockets, GitLab CI/CD | 2025

Designed and built a real-time multimodal AI command center that unifies CI/CD pipelines, cloud infrastructure telemetry, and security threat response into a single voice-controlled dashboard. Integrated Google Gemini Live API for bidirectional audio AI streaming. Implemented autonomous code patching — the AI analyzes build failures, rewrites code, and commits directly to GitLab.

AetherCore — Sovereign AI Security Guardian | aethercore-ai.vercel.app | Next.js 15, FastAPI, Auth0, Mojo, Tailwind CSS | 2025

Built an immersive AI security command center with Auth0 M2M authorization, RBAC enforcement, and GPU-accelerated threat visualizations. Designed for sovereign AI operations — local LLMs act with cloud permissions without exposing raw credentials. Features cyberpunk-style decrypted text animations and context-aware auditory feedback for threat detection.

SEND-EAT — Multi-Vendor Food Delivery KYC System | TechTides Inc. | Flutter, Django, Cloudinary, PostgreSQL | 2025

Engineered a role-based KYC signup system for a multi-vendor food delivery platform. Built compressed document upload pipeline (on-device compression 5MB → 1.5MB), Cloudinary-backed admin verification queue, and reusable Flutter widget library. Cut upload time by 70% and supported 10,000+ concurrent users.

Sentinel Zero — AI Decision Intelligence System | Next.js 14, TypeScript, OpenRouter LLM, Tailwind CSS, Framer Motion | 2025

Built a production-grade AI analysis platform providing risk assessments across finance (scam

detection), life (behavior insights), and business (workflow optimization) domains using free-tier LLM routing via OpenRouter.

LexNakamoto — Decentralized sBTC Escrow Protocol | *Clarity 4, Stacks Nakamoto, SIP-010, Vitest* | 2025

Developed a trustless milestone-based escrow smart contract for the Stacks blockchain enabling sBTC payments with dispute resolution and post-condition security.

Tesla-X Investment Platform | tesla-x-investment.vercel.app | *Next.js, Fintech UI* | 2025

Built a production fintech stock investment interface with [real-time price feeds](#) and portfolio analytics.

HACKATHONS & ACHIEVEMENTS

Devpost Portfolio — 5 Hackathon Awards | [View Projects](#)

- Built and submitted functional prototypes across AI, Web3, and DevOps domains under strict time constraints

EDUCATION

University of Benin — Benin City, Nigeria | 2024 – Present

Bachelor of Engineering (B.Eng) in Industrial Engineering (200 Level)

De-Crown College — Lagos, Nigeria | 2022 – 2024

Senior School Certificate Examination (SSCE)

LANGUAGES

- English:** Native / Bilingual

- French:**Elementary (A2) — Actively improving through immersion
